

# A123 solid state battery

What is A123 battery?

A123 is one of the pioneers in the global passenger battery system solutions. With its unique global super nano lithium iron phosphate technology, the company's 12V/48V battery products have higher energy density, better safety and greater adaptability.

Where are A123 batteries manufactured?

A123, a Texas-based company, has factories in China where they produce cells, modules and battery management systems. They also have offices in the USA, the Netherlands, Northern Ireland, the UK and Norway.

Why should you choose A123 power battery system?

Thanks to its outstanding features such as high energy density, reliability and safety, A123 provides high-quality power battery system solutions for customers in the field of high-performance sports cars and F1 racing cars.

Are A123 Systems and Ionic Materials working together?

"The efforts of A123 Systems and Ionic Materials have been a creative and successful collaboration that has resulted in a state-of-the-art product we are proud to bring to market before anyone else in the industry," said Jim Paye, acting CTO of A123 Systems.

Working together through their joint development agreement, A123 and Ionic Materials have developed an innovative and industry first approach to an All Solid State Battery (ASSB) that ...

A123 Systems LLC has made an investment in Solid Power Inc., a leading developer of technology which enables breakthroughs in the energy density and safety of next generation batteries.

By combining Ionic Materials' advanced ionically conductive polymer with A123's next-generation NMC/graphite lithium-ion chemistry, the companies have created a battery ...

This breakthrough technology represents a significant advancement in the battery industry, promising to set new standards in both performance and safety. "A123's Semi-Solid-State ...

A123 is one of the pioneers in the global passenger battery system solutions. With its unique global super nano lithium iron phosphate technology, the company's 12V/48V battery products ...

The company announced plans for commercial launch of its Semi-Solid-State Battery in 2024 from its facility in Hangzhou, China. It also participates in industry conferences ...

## A123 solid state battery

A123 Systems LLC has made an investment in Solid Power Inc., a leading developer of technology which enables breakthroughs in the energy density and safety of next ...

In February 2018, A123 announced an investment in Ionic Materials' solid-state battery technology. Ionic is developing a unique polymer electrolyte that claims new levels of safety ...

A123 Systems has invested in Solid Power, a developer of solid-state battery technology. Solid Power's tech combines a high-capacity cathode with a high-capacity lithium metal anode in combination with a high-ionic ...

A123 is one of the pioneers in the global passenger battery system solutions. With its unique global super nano lithium iron phosphate technology, the company's 12V/48V battery products have higher energy density, better safety and greater ...

This breakthrough technology represents a significant advancement in the battery industry, promising to set new standards in both performance and safety. "A123's Semi-Solid-State Battery (SSSB) offers exceptional safety performance, even ...

Solid Power, a company specializing in solid-state batteries invested by Wanxiang A123, was established in 2012 and has developed a solid-state battery that is 2-3 times more powerful ...

The "Quest" philosophy drives A123 vision for smart cities, autonomous logistics, and precision agriculture. These batteries enable real-time monitoring, AI-powered ...

A123 Systems has invested in Solid Power, a developer of solid-state battery technology. Solid Power's tech combines a high-capacity cathode with a high-capacity lithium ...
