

# Analysis of energy storage battery rental demand

Are battery energy storage systems the future of electricity?

In the electricity sector, battery energy storage systems emerge as one of the key solutions to provide flexibility to a power system that sees sharply rising flexibility needs, driven by the fast-rising share of variable renewables in the electricity mix.

How much does a battery energy storage system cost?

The average installed cost of battery energy storage systems designed to provide maximum power output over a 4-hour period is projected to decline further, from a global average of around USD 285/kWh in 2021 to USD 185/kWh in the STEPS and APS and USD 180/kWh in the NZE Scenario by 2030.

What is a utility-scale battery energy storage system?

Utility-scale battery energy storage systems are directly connected to the distribution or transmission systems. They typically offer much higher capacities and greater storage volumes than behind-the-meter systems.

Why is battery energy storage important?

In the electricity sector, battery energy storage emerges as one of the key solutions to provide flexibility to a power system that sees sharply rising flexibility needs, driven by the fast-rising share of variable renewables. The ongoing decline in the cost of battery packs is crucial to this.

Why do we need a behind-the-meter battery energy storage system?

Another common motivation for the installation of behind-the-meter battery energy storage systems is to improve resilience against interruptions in the power supply from the grid, where behind-the-meter battery storage systems coupled with a distributed energy resource increasingly compete with traditional solutions such as diesel generators.

Why is battery energy storage a key technology in light-duty vehicles?

Battery electric vehicles become the dominant technology in the light-duty vehicle segment in all scenarios. In the electricity sector, battery energy storage emerges as one of the key solutions to provide flexibility to a power system that sees sharply rising flexibility needs, driven by the fast-rising share of variable renewables.
