Can you use jumper cables to start a dead battery?

Using jumper cables to start a dead battery will get you going again and allow you to drive somewhere safe. Instead of getting stranded, check out our favorite field-tested booster cables. A set of jumper cables connected to a vehicle engine's battery terminal posts; (photo/Derek Mau) Support us!

What is a Energizer battery jumper cable?

This Energizer is a well-designed 1 gauge 30-foot booster battery jumper cable with a permanent installation kit and a simply attach socket. This is especially useful for you with tow trucks and roadside assistance vehicles, as it allows them to safely jump-start a dead or poor battery from behind a vehicle conveniently.

What is a 20 ft booster battery jumper cable?

This Energizer is a well-designed 2 gauge 20FT booster battery jumper cable with a permanent installation kit and a simply attached socket. This is especially useful for you with tow trucks and roadside assistance vehicles, as it allows them to safely jump-start a dead or poor battery from behind a vehicle conveniently.

What are jumper cables and how do they work?

Jumper cables, also known as jump leads or booster cables, are meant to transfer power from one vehicle to another when a battery has lost charge to the point it cannot start the vehicle's engine. They work by connecting the battery of a functioning vehicle to the dead battery, allowing the latter to receive enough power to start the engine.
