

Battery weak please lower voltage aegis solo

Why is my Geek vape aegis solo not working?

Replace the battery if none of the above solutions work. If nothing happens when you attempt to use the Geek Vape Aegis Solo, it's likely that the battery is dead or that the device is locked. To unlock the device, press the fire button five times quickly. If the device still doesn't work, try charging the battery.

How to change wattage on Geek vape aegis solo?

If the device is in wattage mode, you can adjust the power by pressing the plus and minus buttons on the front of the device. To change vaping modes, press the fire button three times quickly to open the menu. The reason why the Geek Vape Aegis Solo is such a popular vape mod is its reliability.

Can I charge the aegis solo with a mobile phone?

Don't charge the Aegis Solo with a mobile phone or tablet charger. Make sure that the battery is secure and installed with the correct orientation. The battery's positive pole should face the top of the mod.

Does the Geek vape aegis solo withstand shocks?

This is your quick-start Geek Vape Aegis Solo instruction manual. Part of why the Geek Vape Aegis solo does such a good job of withstanding shocks is because it has a threaded battery compartment that keeps water out and won't pop open accidentally.

How do I unlock the Geek vape aegis solo?

To unlock the device, press the fire button five times quickly. If the device still doesn't work, try charging the battery. The Geek Vape Aegis Solo won't operate if it doesn't have a solid electrical connection from the battery to the atomizer coil.

What should I do if my aegis solo won't charge?

Try a different USB cable. Although the Aegis Solo can take a great deal of abuse, USB cables wear out quickly when they're used every day. Try a different computer or a different USB port on the same computer. Don't charge the Aegis Solo with a mobile phone or tablet charger.

If nothing happens when you attempt to use the Geek Vape Aegis Solo, it's likely that the battery is dead or that the device is locked. To unlock the device, press the fire button five times quickly.

I bought the Aegis solo around 1.5 months ago and at first it was brilliant. However, more and more once the vape loses charge the wattage drops. This started happening when the vape ...

The Aegis will only apply up to 9v to the coils and it can't go higher. And that error means you have to lower the wattage so the voltage will be something less than 9v.

Battery weak please lower voltage aegis solo

The battery's positive electrode should be facing the top of the mod. If the device's battery rattles, it's not safe. Replace the battery if none of the previous options work.

I've a Geekvape Aegis solo, (which is about 2 years old now) and recently (over the last week or so) it's been turning itself off, and refusing to go on until I plug it in for charging.

This is because the voltage drop when fired goes below the battery cutoff level, which I have set at 3.2V. I assume this is what is happening with your Aegis mod, so the other ...

It sounds like you're stressing (and damaging) your battery - it's struggling to provide 60 - 70 W at any point, and as the voltage drops it's completely unable to supply it.
