Which solar charge controller is best for lithium ion batteries?

The most suitable solar charge controller for Li-ion batteries is the MPPT solar charge controller. The MPPT solar charge controller is an improved version of the PWM type, which is ideal for complex solar control systems and is the best choice for lithium-ion batteries.

What is a lithium battery solar controller?

A lithium battery solar controller is a type of dedicated solar controller that uses a Maximum Power Point Tracking (MPPT) algorithm to harvest the most energy from the solar array. Like other solar controllers, it comes in MPPT and PWM types. An MPPT solar charge controller has a higher conversion capacity compared to a PWM charge controller, which usually has only 70% conversion capacity.

What is a solar charge controller battery type?

Battery Type decides how much charging voltage is required, and how complex the charging cycle for the battery is to deliver safe and efficient charging. Usually, lithium-ion, lead-acid (sealed and flooded), and nickel-based batteries are the common battery types used for solar charge controllers.
