

# Bigblue solar charger time to charge battery

Does the BigBlue 28W solar charger work?

Review Summary: The BigBlue 28W Solar Charger worked perfectly for me on two mid-distance thru hikes and a monthlong bikepacking trip, keeping electronics for two people charged indefinitely. Even in shade and intermittent sun it still provides a meaningful amount of charge.

How many solar panels does a BigBlue solar charger have?

The BigBlue solar charger has five panels that fold up into the footprint of a single panel. Four are solar panels, and the fifth has a device pocket and three USB charging ports. Four eyelets on the corners attach to included mini-carabiners for securing the panel to whatever your setup is.

Is the BigBlue solarpower 28 a good solar charger?

The SolarPower 28 performed better than most other panels in our indirect solar charging tests. Efficiency and ease of use are often a trade-off for portability and weight. The larger the panel, the faster it will charge your devices, and the more difficult it might be to fit into your backpack. This is also true of the BigBlue SolarPower 28.

Should I buy a BigBlue 28W solar panel?

If you're car camping you can get better performance with a bigger panel, but the BigBlue 28W would still be helpful, especially if you lay it out in direct sunlight. It would also work well for travel to places with unreliable electricity, as it's thin enough to pack easily into a suitcase.

Do you need a wall plug for a BigBlue solar panel?

The BigBlue solar panel successfully kept our phones and power banks (and a Kindle and Garmin InReach Mini) charged as much as needed on both trails. Aside from our pesky need for food, we could have lived out there forever without ever needing a wall plug.

How many USB ports does a BigBlue solarpower 28 have?

The version readily available in the US now features one USB-A port and two USB-C ports. The BigBlue SolarPower 28 is a 24-watt monocrystalline folding solar panel that weighs 20.9 ounces and measures 31 inches in length, 11.5 inches in height, and 0.2 inches in thickness when fully opened.

The downside is that if the battery doesn't start fully charged, it likely won't fully charge it, but it will charge it as much as possible and is better than not charging at all.

When buying a solar panel, charging efficiency and dependability are downright crucial. The BigBlue SolarPower 28 stood out as one of the most efficient panels we tested in both direct and indirect solar charging ...

# Bigblue solar charger time to charge battery

The Big Blue solar battery charges using a 28W solar panel, taking about 6-7 hours to fully charge in good sunlight. The LiFePO4 battery provides over 4,000 charge cycles ...
