

# Black and Decker battery charger solid red light

What does a red light on a black and Decker Charger mean?

A flashing red light on your Black and Decker charger usually signifies that there is a problem with the battery. This could mean that the battery is either defective, too hot, or too cold for charging. If the light blinks rapidly, it often indicates that the charger has detected a weak or damaged battery. Chart: Indicator Light Meanings

Why is my Black & Decker 36V battery charger flashing red?

Understanding the meaning behind the flashing red light and knowing how to effectively address the issue can save you time and ensure your tools remain operational. A flashing red light on your Black and Decker 36V lithium battery charger typically indicates an issue with the battery, such as it being weak or damaged.

How do I know if my Black & Decker battery is charging?

If you have a Black and Decker device, the tell-tale sign that you're having charging issues is when the light on the charger begins to rapidly blink red. With a secure connection to a functional battery, that light is often red or blinking green until the battery is fully charged, at which point it will flip over to solid green.

Do Black & Decker Chargers have flashing lights?

Regularly, you'll see chargers use flashing lights for only one purpose. But, with Black and Decker chargers, that's not the case. That's because there are actually two different red flashing lights, but both contribute to the not charging issue. Both of them flash red but do so in clearly different patterns.

Why is my Black & Decker battery not charging?

The reason why your Black and Decker battery isn't charging might end up being the charger itself, so it's always best to clear that up. The easiest way I can think of to test if your charger is working or not is to use it on another battery. In this case, you'll need another Black and Decker battery that fits the charger you have.

Why is my Black & Decker Charger flashing green?

Your Black and Decker charger is flashing green because the battery is charging. The green blinking will usually last as long as the charging process is in progress. The light will then turn solid once your battery has a complete charge. This means that your battery is now ready for use in the Black and Decker power tool of your choice.

For our Lithium CEC chargers (California Energy Commission), when in maintenance mode, the light will go on and off based on when the battery is charging. See below for clarification. ...
