

California solar battery law

What is California's new solar law?

The law builds on the original 2020 solar requirement and now emphasizes solar and battery systems to increase grid resilience and reduce reliance on fossil fuels. Under the 2025 energy code, all new homes must: These requirements aim to reduce greenhouse gas emissions, cut energy bills, and help California meet its renewable energy goals.

Does California have a solar mandate for new commercial construction?

By now most California builders know about the solar mandate for new commercial construction that the California Energy Commission (CEC) implemented in 2019, but few are aware that the latest changes to the Building Energy Efficiency Standards (Title 24) include battery storage system requirements, effective January 1, 2023.

What are the 2022 title 24 California Solar mandate changes?

The CEC released the 2022 Title 24 California solar mandate changes including new requirements for solar PV, battery storage, and EV charging to encourage the installation of onsite clean energy for new buildings.

When will solar PV and battery storage be required in California?

Effective January 1, 2023, these code updates extend requirements for the installation of solar PV and battery storage in California for the following building types in the table below.

When does California's Solar mandate come out?

California's Solar Mandate was updated in December of last year, and these updates went into effect in January 2023. Known as the 2022 Energy Code, this will require all single-family homes to be electric-ready. It will also include guidance for installing battery storage systems.

What is solar & battery law & how does it work?

This applies to single-family homes and low-rise multifamily buildings up to three stories. The law builds on the original 2020 solar requirement and now emphasizes solar and battery systems to increase grid resilience and reduce reliance on fossil fuels.
