

# Can the energy storage film be worn as a thermal manager

Can radiative cooling and solar heating be integrated in thermal management films?

Integration of Radiative Cooling and Solar Heating in Thermal Management Films for Year-Round Energy Savings The application of zero-emission passive radiative coolers is a crucial step toward global carbon neutrality. However, a single radiative cooling function cannot meet the thermal requirements under various weather conditions.

How does mtpeg thermal management work?

To demonstrate exceptional thermal management application of our monolithic PCM film, the DICP letter-shape MTPEG film is placed in a hot plate to ensure all the letters reaching the equilibrium temperature, and then transferred to a cold plate to record the heat dissipation process.

Are flexible PCM films suitable for wearable devices?

Notably, such flexible PCM films are easily integrated into wearable devices with a flexible graphene film as thermal source, revealing superior temperature control behaviors, together with unprecedented electro-thermal and photo-thermal energy conversion performance.

Can PCMS be used as a driving carrier for thermal energy storage?

The technique of thermal management using PCMs as driving carrier for temperature control and thermal energy storage has been developed for decades, while traditional PCMs have been always considered as bulky liquids or solids with classical melting and solidifying behaviors.

How is thermal cycle performance evaluated?

Thermal cycle performance was evaluated in the range from (10 to 80) °C at a rate of 10 °C/min<sup>-1</sup> using an automatically heating-cooling device customized in our laboratory (shown in Fig. S3).

What is the output energy of mtpeg film?

The output energy is represented by  $m(\Delta H + \int_{T_i}^{T_f} C_p dT)$ , where  $m$ ,  $\Delta H$  and  $C_p$  stand for the mass, latent heat and specific heat of MTPEG film respectively,  $T_i$  and  $T_f$  correspond to the initial temperature and final temperature, respectively, under the assumption that all MTPEG films participate in the phase change process.
