What is behind the meter energy storage?

Behind-the-Meter storage, on the other hand, is deployed on the consumer's side of the electricity meter. It includes energy storage systems installed in homes, commercial buildings, hospitals, or factories. Often paired with rooftop solar systems, these batteries store self-generated energy for later use or serve as backup during outages.

What is behind the Meter (BTM) energy storage?

A 100 MW grid-scale battery system that absorbs excess solar power during the day and releases it in the evening to balance grid demand. What is Behind-the-Meter (BTM) Energy Storage? Behind-the-Meter (BTM) energy storage is installed on the customer's side of the electricity meter, serving homes, businesses, and industrial facilities.

What is the difference between a behind the meter and FTM system?

In many cases, excess energy generated by behind-the-meter systems can be sold back to the grid, providing an additional source of income or energy credits for the customer. On the other hand, Front-of-the-Meter (FTM) systems are on the utility side of the meter.
