

## Charging an auxiliary battery with solar from anderson

How do you charge a solar panel with an Anderson plug?

Set it up with proper fusing and correct wire size from your Anderson plug connection from the vehicle and you should enjoy heaps of charge from either your car or solar panels - fixed or movable. You could even have the same charger in both setups.

Can a solar panel charge an AGM battery?

Your battery, being an AGM will safely tolerate a charge voltage up to 14.4v. The problem with using an unregulated solar panel is that while the SoC of the battery is low, the battery's own current draw will self regulate the solar panel voltage, and the solar panel will take some time to charge the battery.

How do I charge a secondary battery from my alternator?

Effortlessly charge your secondary battery from the alternator by connecting your DC/DC charger using the 3-pin Anderson connector. This charger is both dustproof and waterproof, and it's compatible with lithium batteries--making it an ideal choice for larger battery setups. If playback doesn't begin shortly, try restarting your device.

What plugs do I need for auxiliary battery charging?

If your auxiliary battery is in a caravan or trailer then the standard trailer lights connectors are way too small for the 6 B&S cable, and can't even come close to handling the high currents for effective battery charging, so here we use 50A Anderson plugs (Pictured below).

Can a DC-DC charger handle solar and alternator input?

So, in summary - DC-DC charger than handles solar and alternator input. Use movable panels on Anderson connector to position for best charging. It is not possible to have both batteries charged by the same device unless you install some type of isolating switch between the batteries and this is generally not effective.

What is the best setup for vehicle and caravan battery charging?

Can you please advise the best and most cost effective setup for vehicle and caravan battery charging. I have seen two main configurations: solar panels and regulator mounted on vehicle charging two AGM batteries (one start and one auxiliary) connected to caravan with Anderson plugs and caravan solar and regulator to batteries on the caravan.

Effortlessly charge your secondary battery from the alternator by connecting your DC/DC charger using the 3-pin Anderson connector. This charger is both dustproof and waterproof, and it's ...

12V Guru discusses affordable setups for caravan battery charging, using DC-DC chargers, portable solar panels and Anderson connector.

## Charging an auxiliary battery with solar from anderson

It came with a 120w portable solar panel that has NO regulator (cheap one on it failed and the bloke before me by-passed). The battery has a Anderson plug from it to an ...
