What are the different types of energy storage?

These classifications lead to the division of energy storage into five main types: i) mechanical energy storage, ii) chemical energy storage, iii) electrochemical energy storage, iv) electrostatic and electromagnetic energy storage, and v) thermal energy storage, as illustrated in (Figure 2).

How are energy storage technologies classified?

Energy storage technologies could be classified using different aspects, such as the technical approach they take for storing energy; the types of energy they receive, store, and produce; the timescales they are best suitable for; and the capacity of storage. 1.

How many types of thermal energy storage systems are there?

It was classified into three types, such as sensible heat, latent heat and thermochemical heat storage system (absorption and adsorption system) (65). (Figure 14) shows the schematic representation of each thermal energy storage systems (66). Figure 14. Schematic representation of types of thermal energy storage system. Adapted from reference (66).

What are the different types of chemical energy storage systems?

The most common chemical energy storage systems include hydrogen, synthetic natural gas, and solar fuel storage. Hydrogen fuel energy is a clean and abundant renewable fuel that is safe to use. The hydrogen energy can be produced from electrolysis or sunlight through photocatalytic water splitting (16,17).

What type of energy is stored & produced in a storage system?

2. Regarding the type of energy to be stored (received by the storage system) and produced (the output of the system), any energy carrier (electricity, mechanical work of shaft or reciprocating pistons, thermal energy, fuels, etc.) could be the case.

What type of energy storage system stores electrical energy?

Electrostatic and electromagnetic energy storage systems store electrical energy, with no conversion to other forms of energy (i.e., stores as electric field). Capacitors, Supercapacitors and Superconducting magnetic Energy Storage (SMES) belong to this type of energy storage system (32).
