Is Fisker giving up on solid-state batteries?

Fisker says that it has given up on solid-state batteries after having announced a "breakthrough" that was supposed to enable "500 miles of range and 1-minute charging" in its electric cars.

Does Henrik Fisker have a solid-state battery?

Henrik Fisker has abandoned his electric vehicle startup's effort to create a solid-state battery, the Fisker Inc. founder told The Verge in a recent interview.

What is a Fisker battery?

Fisker's solid-state battery powers electric vehicles--and drones and flying taxis. Fisker Inc. founder Henrik Fisker and his new EMotion electric vehicle. Since Alessandro Volta created the first true battery in 1800, improvements have been relatively incremental.

Is Fisker's battery technology ready for commercialization?

In short, Fisker believes that the technology is nowhere near ready for commercialization. That's despite indicating the exact opposite in the "breakthrough" announcement. Fabio Albano, who was VP of battery systems at Fisker at the time, commented:

Why did Fisker axe solid-state batteries?

Fisker's decision to axe the solid-state program comes after his startup spent its first few years working to develop the technology. In 2018, he said the company had solved some of the problems related to making solid-state batteries, and that it was just a few months away from a final design.

Can a solid-state battery be made at scale?

And they can't be manufactured at scale. Fisker's head battery scientist, Fabio Albano, solved these problems by essentially turning a one-story solid-state battery into a multistory one. "What our scientists have created is the three-dimensional solid-state battery, which we also call a bolt battery," says Fisker.

When that realisation came, solid-state batteries were "completely dropped at that point," Fisker said. However, the company founder does not want to completely rule out the ...

Fisker's solid-state batteries have a long way to go before they make it into a car, however. The company projects the tech won't be ready for mass production until "post 2023."

Fisker's solid-state batteries boast higher energy density, reducing weight and increasing range potential compared to conventional lithium-ion batteries. This technology promises better performance and longer battery ...

## Company fisker solid-state batteries

Back in 2017, Fisker was touting plans for solid-state battery technology that could enable a range of 500 miles and a charging time of just one minute for electric vehicles.
