

Does a grid-level battery energy storage system perform energy arbitrage?

The present work proposes a long-term techno-economic profitability analysis considering the net profit stream of a grid-level battery energy storage system (BESS) performing energy arbitrage as a grid service.

Is energy storage a profitable business model?

Although academic analysis finds that business models for energy storage are largely unprofitable, annual deployment of storage capacity is globally on the rise (IEA,2020). One reason may be generous subsidy support and non-financial drivers like a first-mover advantage (Wood Mackenzie,2019).

How profitable is Bess for Energy Arbitrage grid applications?

In fact, as reported by the CAISO special report on battery storage , the largest positive revenue comes from day-ahead market energy schedules. For this reason, it is crucial to properly analyze the profitability of using BESS for energy arbitrage grid applications.

What are business models for energy storage?

Business Models for Energy Storage Rows display market roles, columns reflect types of revenue streams, and boxes specify the business model around an application. Each of the three parameters is useful to systematically differentiate investment opportunities for energy storage in terms of applicable business models.

Does battery degradation affect Bess profitability?

We found that,even without degradation,the break-even investment cost that makes the BESS profitable with a power to-energy-ratio of 1 MW/2MWh is 210 \$/kWh. By implementing a cycle-counting degradation model,we observed a remarkable battery degradation on BESS profitability corresponding to a yearly net profit reduction in the 13-24 % range.

How can energy storage be profitable?

Where a profitable application of energy storage requires saving of costs or deferral of investments,direct mechanisms,such as subsidies and rebates,will be effective. For applications dependent on price arbitrage,the existence and access to variable market prices are essential.
