

Energy storage outdoor power supply evaluation

Can FEMP assess battery energy storage system performance?

This report describes development of an effort to assess Battery Energy Storage System (BESS) performance that the U.S. Department of Energy (DOE) Federal Energy Management Program (FEMP) and others can employ to evaluate performance of deployed BESS or solar photovoltaic (PV) +BESS systems.

How is energy storage capacity calculated?

The energy storage capacity, E , is calculated using the efficiency calculated above to represent energy losses in the BESS itself. This is an approximation since actual battery efficiency will depend on operating parameters such as charge/discharge rate (Amps) and temperature.

How do you evaluate efficiency and demonstrated capacity of a Bess sub-system?

Evaluate Efficiency and Demonstrated Capacity of the BESS sub-system using the new method of this report. Compare actual realized Utility Energy Consumption (kWh/year) and Cost (\$/year) with Utility Consumption and Cost as estimated using NREL's REopt or System Advisor Model (SAM) computer programs.

How is metered PV energy delivery compared to a computer model?

That method compared actual metered PV system energy delivery with that of a computer model. The computer model used was the National Renewable Energy Laboratory's (NREL's) System Advisor Model (SAM). The KPIs reported are Availability (% up-time) and Performance Ratio (PR).
