

Energy storage system failure analysis

What is the first publicly available analysis of battery energy storage system failures?

Claimed as the first publicly available analysis of battery energy storage system (BESS) failures, the work is largely based on EPRI's BESS Failure Incident Database and looks at the root causes of a number of events inputted to it.

Why is battery energy storage system failure so important?

Battery energy storage system (BESS) failure is being investigated heavily because of how disastrous BESS failures can be, and how important BESS is to the future of the grid. A joint study commissioned to analyze root causes of BESS failures underlined the impact of battery monitoring more than battery cell defects.

What are the different types of energy storage failure incidents?

Stationary Energy Storage Failure Incidents - this table tracks utility-scale and commercial and industrial (C&I) failures. Other Storage Failure Incidents - this table tracks incidents that do not fit the criteria for the first table. This could include failures involving the manufacturing, transportation, storage, and recycling of energy storage.

What are other storage failure incidents?

Other Storage Failure Incidents - this table tracks incidents that do not fit the criteria for the first table. This could include failures involving the manufacturing, transportation, storage, and recycling of energy storage. Residential energy storage system failures are not currently tracked.

Are battery energy storage systems causing a fire?

A look at the data and literature around Failures and Fires in BESS Systems. The number of fires in Battery Energy Storage Systems (BESS) is decreasing.

What causes a system to fail?

Root Cause of Failure: Design, manufacturing, integration/assembly/construction, or operation. Affected BESS Element: Cell/module, controls, or balance of the system. The study analyzes the proportion of failures associated with each root cause and BESS element, the relationship between the two, and trends in failure types and rates over time.
