Why are California's solar batteries so important?

That's now changing. Since 2020, California has installed more giant batteries than anywhere in the world apart from China. They can soak up excess solar power during the day and store it for use when it gets dark. Those batteries play a pivotal role in California's electric grid, partially replacing fossil fuels in the evening.

Could solar batteries save California from blackouts & brownouts?

Lithium-ion batteries are shown inside a BoxPower SolarContainer housing, part of a PG&E Corp. remote grid power system, in Santa Rosa, California. Officials in California say an investment in solar batteries may have saved the state from widespread blackouts and brownouts during a heat wave from June 23 to July 12.

Can battery storage slash planet-warming emissions?

Nationwide, battery storage is being used to address renewable energy's biggest weakness: the fact that the wind and sun aren't always available. Grid batteries could be a useful tool to slash planet-warming emissions, experts say, though they still need further advances in terms of costs, technologies and how they are used.
