

# How solar battery storage works

What is battery storage & how does it work?

Start here. At the most basic level, battery storage allows power produced by a solar system to be stored for use at a later time. All solar systems produce power at different times than homeowners use it. Solar systems will typically overproduce during the middle of the day compared to what the homeowner needs.

How do solar batteries work?

The system then becomes a closed loop, where the battery powers the home's backup circuits and the solar panels recharge the battery. In this respect, solar batteries can function very similarly to home generators, except the time they can run for is a bit different.

Do solar batteries store energy for later use?

At the highest level, solar batteries store energy for later use. If you have a home solar panel system, there are a few general steps to understand: It's first worth a quick refresher on how solar panel systems work to understand how storage works with solar panels.

Why do you need a solar battery?

A solar battery helps you use more of the solar energy you're creating. If you don't have battery storage, any excess electricity from solar power goes to the grid. In some locations this might be the most economical way to use your solar energy.

How does a solar system work?

The moment the outage occurs, the gateway instantly detects the event, disconnects the home from the grid, and turns on the battery. The system then becomes a closed loop, where the battery powers the home's backup circuits and the solar panels recharge the battery.

Do you need batteries for solar energy storage?

In some cases, yes, having batteries for solar energy storage can be a valuable complement to your solar panels. Having battery storage lets you use solar power 24/7, maximize savings from your system, and have reliable power during bad weather and grid outages.

Solar battery storage has many benefits and can be of critical importance for homeowners looking to protect themselves against power outages.
