

How to make a door that can store electricity

How to generate electricity from a garage?

If you want DIY electricity: look in your garage... The potential for electrical generation is everywhere. You just need to understand how best to harness it. 1. The Bicycle DIY Generator This one is first because it's such a simple generator. By turning the gears of your bike, you can turn a Rotor.

How do you attach a battery to a door?

Take the OTHER wire and do the same procedure, only to the other aluminum strip. If you get stuck, or are confused, feel free to contact me or comment. Now, mount the voltage circuit on the other side of the door with some tape or similar adhesive. The entire circuit, including the battery, should be very tiny and almost invisible.

How do you attach a wire to a doorknob?

You can easily attach the wire to the aluminum by bending over a portion of the tape, and wrapping the wire around it. The idea here is to create a "circuit" out of your doorknob, so that when someone attempts to open it, the circuit is completed and electrocutes them. There are many ways to do this, just experiment. :)

How do you attach a transformer to a doorknob?

Attach two 5-inch pieces of magnet wire to the positive and negative high voltage outputs of your transformer circuit. It's easy to remove the insulation from the magnet wire with a soldering iron, because it just melts off. Cut some aluminum tape (two tiny 1-inch by 1/8-inch strips) and stick each one on the doorknob, like so:

How many volts does a door breaker use?

Now that the circuit is finished (make sure you install a switch into the circuit!), it should easily operate on the average AA battery, or 1.5 volts. And now you can apply it to your door! The tricky part is getting the victim to complete the circuit with their hand and release the power stored in the capacitor through their hand.
