

Providing sustainable, affordable, and reliable electricity through low-carbon energy development in the Nigerian energy sector is fundamental to ensuring energy security. ...

Hydrogen energy is essential to establishing a sustainable and reliable energy system. The continuously growing demand for hydrogen is driven by the challenges associated ...

Green Hydrogen Vision The Government of Portugal aims at achieving carbon neutrality by 2050 and envisages hydrogen as a fundamental vector for the decarbonization of various sectors of ...

The company recently withdrew from a plan to make its two German steelworks carbon-neutral by 2050 using green hydrogen, and even handed back EUR1.3 billion (\$1.5 billion) in subsidies due to ...

As a type of clean and high-energy-density secondary energy, hydrogen will play a vital role in large-scale energy storage in future low-carbon energy systems. Incorporating ...

le energy to achieve carbon neutrality by 2045. To achieve this goal, we plan to introduce hydrogen combustion machinery such as hydrogen boilers/burners and adopt green LNG that ...

Other highlights from the National Plan include an aim to establish a hydrogen supply system that uses both industrial by-product hydrogen and renewable hydrogen; ...

pport the development of technologies to use hydrogen. The Hydrogen with Carbon Management Program will invest in the advancement and utility-scale of clean hydrogen production (e.g., ...

We have surveyed the scope of hydrogen energy as a potential sustainable energy carrier for achieving carbon neutrality by discussing several ...

In the &quot;Energy Standardisation Action Plan for Carbon Peak and Carbon Neutrality&quot; (NEA, 2022), it calls to develop a complete standard system for hydrogen with a focus on renewable ...

Hydrogen is a clean energy source that widely exists in nature. The booming renewable energy with its volatile and intermittent nature has granted hydrogen a unique value in the context of ...

The Strategy of Hydrogen Development in Hong Kong (the Strategy) does not only prepare Hong Kong for the wider application of hydrogen energy in the future, but also signifies the ...

By taking the carbon neutrality scenario of China as an example, the author applies this joint model to deploy a scheme research on power generation and hydrogen ...

By addressing H<sub>2</sub> storage, transport, and conversion challenges, this review not only covers critical aspects of H<sub>2</sub> production but also provides a ...

Nevertheless, the targets for 2045 necessitates studying the Swedish energy system at national scale in the context of sector coupling & storage. This work examines the ...

UNECE has launched a project on carbon neutrality to understand the implications and opportunities to inform decision makers about effective policy and technology options. ...

A low-carbon hydrogen economy, beyond petrochemical and transportation sectors, will require fossil fuels to support emerging carbon- neutral market opportunities like utility-scale, hydrogen ...

As a secondary form of energy, hydrogen has significant advantages, such as zero pollution and cross-space storage. As a global leader in clean and low-carbon energy, POWERCHINA ...

Abstract Fundamental transformations are taking place in the areas of energy structure on the supply side and on the energy-consumption ...

BEIJING -- Chinese authorities on March 23 released a plan on the development of hydrogen energy for the 2021-2035 period as the country races toward its ...

Our role was in gasifying brown coal and refining hydrogen, and we plan to use the expertise gained from this project to provide a large supply of CO<sub>2</sub>-free ...

The authors would like to thank McKinsey & Company for the analytical support and insight provided in the making of this policy. They also recognize the early work of the Solar and ...

Importantly, the production of hydrogen from renewable energy sources is perfectly aligned with the objectives of carbon neutrality, offering a strategic avenue to bolster ...

The use of hydrogen as an energy source is considered key to achieving carbon neutrality by 2050. Japan has been quick to focus on ...

Hydrogen/ammonia is given a position as a new resource toward achieving carbon neutrality in the plan, and its public implementation ...

Under the global low-carbon target, hydrogen is essential to address uneven energy spatial distribution and

seasonal energy imbalances. However, the issues of insufficient ...

The EU's hydrogen strategy lays out the European Commission's vision vis-à-vis hydrogen and its role as an energy carrier in a European integrated energy system. The Strategy considers ...

The framework simultaneously optimizes three critical objectives: maximizing renewable energy integration, minimizing carbon emissions, and enabling green hydrogen ...

Here we review the shifting landscape of electrical energy storage technologies in China, commenting on the technological advantages, breakthroughs, bottlenecks, and future ...

Bioenergy carbon capture and storage (BECCS) is essential for achieving carbon neutrality targets, whereas relevant demonstration projects have not yet been prioritized in ...

Singapore is bringing in large-scale imports of 4 GW by 2035, ~30% of Singapore's energy supply. In Mar and Sep this year respectively, EMA announced the granting of conditional ...

It can also support the expansion of low- or zero-carbon electricity by providing a means for long-duration energy storage and offering improved flexibility and revenue for all types of clean ...

Considering multiple equipment and energy conversion forms, we establish a refined comprehensive model of the complete hydrogen energy chain and integrate it with energy ...
