

To address the power supply-demand imbalance caused by the uncertainty in wind turbine and photovoltaic power generation in the regional integrated energy system, this ...

The fuel cell serves as a peak power source and shares the power load with the other renewable energy sources, smoothing out the fluctuations in wind and photovoltaic power ...

The complementary characteristics of solar and wind energy, where solar power typically peaks during daylight hours while wind energy becomes more accessible at ...

This paper comprehensively describes the advantages and disadvantages of hydrogen energy in modern power systems, for its production, storage, and applications. The ...

There have been many studies on hydrogen production from wind power and photovoltaics. Reference [3] reviewed the system composition and energy management strategies of wind ...

Unlike existing studies focusing solely on wind or solar power, this study explored the synergies between energy sources and hydrogen storage to create a more ...

He et al. [41] compared different types of energy storage devices (including battery, thermal energy storage, PSH, and hydrogen storage) in a hybrid wind-PV system.

Under the extensive expansion of wind and solar power units, the intermittent and fluctuating characteristics of wind and solar energy have caused serious wind and solar power ...

This paper proposes a model for the configuration of park-based electro-hydrogen conversion and energy storage capacity that takes into account the uncertainties of wind and ...

In this paper, a direct current (DC) convergence-based wind-solar storage combined hydrogen production system is proposed, which includes photovoltaic power ...

Sustainability goals include the utilization of renewable energy resources to supply the energy needs in addition to wastewater treatment to satisfy the water demand. ...

Battery and hydrogen-based energy storages play a crucial role in mitigating the intermittency of wind and solar power sources. In this paper, we propose a mixed-integer ...

This review paper explores the use of solar and wind energy as new sources of energy to generate electricity and hydrogen to store electricity as revolutionary solutions to ...

The global shift toward next-generation energy systems is propelled by the urgent need to combat climate change and the dwindling supply of fossil fuels. This review explores ...

In the context of wind-solar-hydrogen energy storage, this process utilizes surplus electricity generated by wind and solar systems during ...

The integration of wind and solar energy with green hydrogen technologies represents an innovative approach toward achieving sustainable ...

However, the variable nature of wind and photovoltaic power generation significantly impacts the stability of power grid operations. One way to address this issue is by ...

Abstract As the primary consideration, sizing optimization has great impact on wind-photovoltaic-hydrogen storage integrated energy system (WPHIES) construction. ...

This paper proposed an optimized day-ahead generation model involving hydrogen-load demand-side response, with an aim to make the operation of an integrated ...

Due to the volatility and uncertainty of renewable energy, the stability of off-grid systems is challenged in wind-solar-hydro complementary systems. To improve power supply reliability ...

This manuscript focuses on optimizing a Hybrid Renewable Energy System (HRES) that integrates photovoltaic (PV) panels, wind turbines (WT), and various energy ...

Therefore, this publication's key fundamental objective is to discuss the most suitable energy storage for energy generated by wind. A review of the available storage ...

Wind-solar hybrid hydrogen production is an effective technique route, by converting the fluctuate renewable electricity into high-quality hydrogen. However, the ...

Wind-to-Hydrogen Project Formed in partnership with Xcel Energy, NREL's wind-to-hydrogen (Wind2H2) demonstration project links wind turbines and photovoltaic (PV) arrays ...

In addition, it is crucial to understand which solar and wind-based green hydrogen production systems have been studied and the literature gap on this topic. This review ...

The optimal configuration of energy storage system capacity is one of the effective measures to reduce the

cost of Microgrid. A method for optimizing the capacity ...

To explore these challenges and their environmental impact, this study proposes a hybrid sustainable infrastructure that integrates photovoltaic solar energy for the production ...

Several research works have investigated the direct supply of renewable electricity to electrolysis, particularly from photovoltaic (PV) and ...

This groundbreaking project, located on the coastal tidal flats of the Yudong Reclamation Area in Rudong County, marks a significant milestone as China's first integrated ...

Abstract Green hydrogen production systems will play an important role in the energy transition from fossil-based fuels to zero-carbon technologies. This paper investigates a ...

In recent years, large-scale distributed power sources have been connected to the power system, resulting in problems such as node voltage crossing, power flow reversal, ...

Under the extensive expansion of wind and solar power units, the intermittent and fluctuating characteristics of wind and solar energy have caused serious wind

Multi energy complementary system is a new method of solving the problem of renewable energy consumption. This paper proposes a wind -pumped storage-hydrogen ...
