

Latest regulations on Poland's energy storage electricity price policy

Are electricity prices regulated in Poland?

While retail electricity prices in Poland are heavily regulated, authorities have made several significant interventions in recent years to protect households from global energy shocks. In 2023, the electricity price was frozen at the 2022 level of PLN 412/MWh (net). A partial unfreeze was introduced in mid-2024.

Will freezing retail electricity prices lower Poland's inflation path?

Freezing retail electricity prices through September 2025 lowers Poland's inflation path, but it also begs the question of which steps need to be taken next. We see a balancing act emerging between ensuring the affordability of electricity prices and reaching the long-term goal of launching ambitious energy investment programmes

What is the Polish Energy Act?

The Act introduces a number of market-oriented and pro-consumer solutions that will make the Polish energy market more competitive and open to the changes that the energy industry is undergoing at the time of transformation.

Will Poland freeze energy prices in 2025?

Poland's Council of Ministers has announced a decision to freeze energy prices for households throughout 2025. Starting January 2025, household energy prices will remain unchanged. By mid-year, energy companies will be required to introduce new tariffs, after which the government will evaluate whether additional interventions are necessary.

How will Poland's new electricity cap affect consumers?

Additionally, the collection of the capacity fee will be suspended next year. Under the new regulations, the maximum electricity price for households will stay at 500 Polish zloty (approximately 116 euros) per megawatt-hour, an extension of the cap initially introduced to protect consumers.

Are smart electricity meters a good idea in Poland?

However, in order to explore the benefits of dynamic electricity tariffs, households need to have smart meters. But their deployment in Poland is among the smallest in the EU; only around 15% of electricity meters are "smart". Source: Analysis of Joint Research Center, 2023.

The last quarter of 2024 brought quite a few changes to Polish Energy Law, which set new directions for the market in 2025. Hydrogen has gained dedicated regulation, ...
