What is the largest energy storage facility in the world?

And according to its proposed dimensions, the eight-acre site in Travis will be among the nation's largest. A BESS in Moss Landing, California, is currently the biggest in the world, storing 750MW, only 100MW more than the anticipated capacity in Travis.

Why is energy storage important?

To achieve New York's climate goals, it's clear energy storage will play an important role in the electric grid & transportation system of the future. We work to ensure that markets are developed fairly & with an eye towards enabling a clean energy future. Discover more about our history, mission, leadership, and more.

What is energy storage?

Energy storage encompasses an array of technologies that enable energy produced at one time, such as during daylight or windy hours, to be stored for later use. LPO can finance commercially ready projects across storage technologies, including flywheels, mechanical technologies, electrochemical technologies, thermal storage, and chemical storage.

Will New York City see more battery energy storage facilities?

But according to some new records, the borough will soon see more of the facilities. (Staten Island Advance/Jan Somma-Hammel) STATEN ISLAND, N.Y. -- By 2029, New York City will house dozens of battery energy storage sites, each storing thousands of kilowatts of energy near homes, schools, churches and small businesses.

What are New York state's energy storage goals?

Learn more about installed energy storage projects and New York State's progress toward its energy storage goals. New York's Climate Leadership and Community Protection Act (Climate Act) codified a goal of 1,500 MW of energy storage by 2025 and 3,000 MW by 2030.

Should energy storage be included in the electric grid?

Integrating storage in the electric grid, especially in areas with high energy demand, will allow clean energy to be available when and where it is most needed. As New York continues to invest and build a cleaner grid, energy storage will allow us to use existing resources more efficiently and phase out the dirtiest power plants.
