Should lithium-based batteries be a domestic supply chain?

Establishing a domestic supply chain for lithium-based batteries requires a national commitment to both solving breakthrough scientific challenges for new materials and developing a manufacturing base that meets the demands of the growing electric vehicle (EV) and electrical grid storage markets.

Are lithium-ion batteries suitable for grid-scale energy storage?

Lithium-ion (Li-ion) batteries dominate the field of grid-scale energy storage applications. This paper provides a comprehensive review of lithium-ion batteries for grid-scale energy storage, exploring their capabilities and attributes.

Are lithium-ion batteries the future of energy storage?

As these nations embrace renewable energy generation, the focus on energy storage becomes paramount due to the intermittent nature of renewable energy sources like solar and wind. Lithium-ion (Li-ion) batteries dominate the field of grid-scale energy storage applications.

What is a lithium-based battery blueprint?

This document outlines a U.S. lithium-based battery blueprint, developed by the Federal Consortium for Advanced Batteries (FCAB), to guide investments in the domestic lithium-battery manufacturing value chain that will bring equitable clean-energy manufacturing jobs to America.

What policy developments are affecting the lithium battery supply chain?

The past year has seen many policy developments with implications for the U.S. lithium battery supply chain. The most significant are two laws, the Infrastructure Investment and Jobs Act of 2021 (IIJA) and the Inflation Reduction Act of 2022 (IRA). The provisions of these two laws align with many of the recommendations made in this report.
