

Lithium mining energy storage and new energy stocks that are oversold

How has oversupply affected Lithium prices?

Lithium prices have fallen sharply due to oversupply. By the end of 2024, lithium prices have dropped by over 80% from their peak in 2022. The impact of lithium prices in the past two years has also dealt a heavy blow to the prices of many lithium stocks, leading to many lithium stocks becoming excessively cheap.

Should you invest in lithium stocks?

Multiple industries from transportation, energy production, and storage, the smartphone industry, and others make a strong case for investors to allocate a part of their portfolio to lithium stocks. Just consider the fact that the current penetration of electric vehicles in total car sales globally is still low.

What are lithium stocks?

Lithium stocks are commodity stocks that have principal interests in the mining, refining and distribution of lithium. The companies included under the umbrella of lithium stocks may be involved in the production of other metals and minerals, but lithium will be included in their portfolio.

Should we buy lithium stocks if they are undervalued?

Many lithium stocks have also fallen in the past two years. Considering the widespread adoption of electric vehicles and energy storage products in the future, the long-term demand for lithium will grow. If we can buy lithium stocks when they are undervalued, we may get long-term investment returns from them.
