Can methanol be used for energy storage?

24. 25. Environ. Res. Lett. 2022; 17, 044018 26. 27. Energy storage for multiple days can help wind and solar supply reliable power. Synthesizing methanol from carbon dioxide and electrolytic hydrogen provides such ultra-long-duration storage in liquid form.

Can hydrogen and methanol be used as energy storage media?

Conclusion This study aimed to design energy storage systems (ESSs) using hydrogen and methanol as energy storage media and analyze their long-term and large-scale applicability from a thermodynamic and economic perspective.

What is the difference between methanol and hydrogen energy storage systems?

This study designed and analyzed a hydrogen energy storage system (HESS) with hydrogen storage pressures of 200,350, and 700 bar, and a methanol energy storage system (MESS) from thermodynamic and economic perspectives. MESS showed lower energy efficiency (27.0%) than the 200-bar HESS (28.6%) due to compression and reactor heating requirements.

How methanol can be stored for multiple days?

26. 27. Energy storage for multiple days can help wind and solar supply reliable power. Synthesizing methanol from carbon dioxide and electrolytic hydrogen provides such ultra-long-duration storage in liquid form. Carbon dioxide can be captured from Allam cycle turbines burning methanol and cycled back into methanol synthesis.

Can methanol be stored underground?

Carbon dioxide can be captured from Allam cycle turbines burning methanol and cycled back into methanol synthesis. Methanol storage shows significant cost advantages compared to hydrogen at locations where there are no geological salt deposits for underground hydrogen storage.

Is methanol a long-duration energy storage option?

In order to understand methanol better as a long-duration energy storage option, there are several urgent research needs. The effects of flexible methanol synthesis on catalyst behavior, efficiency, and wear-and-tear should be demonstrated. More experience is needed on methanol synthesis with carbon dioxide rather than carbon monoxide.
