With its flexible form factor and voltage configuration, Microvast's solid-state batteries can be custom made to meet the specific energy and spatial requirements of advanced robotic systems.

This Solid-State Battery unique separator addresses one of the most critical challenges in solid-state battery technology by ensuring excellent ionic conductivity, structural stability, and long-term durability.

"Our bipolar architecture, combined with our all-solid separator, not only simplifies battery design, but also enhances energy density and operational safety," said Dr. Wenjuan Mattis, CTO of Microvast.
