

North Korea water storage group plant operation

How many power plants are in North Korea?

Collectively, the five power plants can generate 134 megawatts when at full capacity, which represents about 1.4 percent of North Korea's entire national electricity supply, according to estimates from the Nautilus Institute. Figure 3. The opening ceremony of Orangchon Power Station No.3, broadcast on Korean Central Television on August 5, 2022.

Does North Korea have a hydropower policy?

Kim dictated the policy during a visit to Jagang (Chagang) Province, and the region has continually been held up since then as an example for the country to follow. Today, the construction of smaller-scale hydropower stations is the main focus of North Korea's electric generation sector, and numerous projects are taking place across the country.

Why is it important to control water storage & discharge in Korea?

In Korea, two thirds of gross rainfall is concentrated in the wet season, along with extreme variations in river discharge, which is why it is very necessary to control water storage and discharge with dams and other hydraulic structures.
