What is a PCI fuel cell system?

PCI is developing a family of ultra-compact solid oxide fuel cell systems. These systems utilize Microlith's reformers to run on logistics fuels. PCI's systems are stack agnostic and can be adapted to both SOFC and HTPEM applications. PCI's technology is readily scalable to small and large systems.

What products does PCI develop?

PCI is in various stages of developing other new products than those in its primary product groups (fuel processors, air cleaners, combustors and burners/oxidizers): Advanced Cetane Analyzer, Catalytic Glow Plugs, Chemical Reactors, and Catalytic Convertors. Precision Combustion is developing a variety of technologies for aerospace applications.

Can PCI convert diesel fuel into electricity?

PCI has developed lightweight, portable commercial-off-the-shelf-based systems proven capable of converting logistics diesel-type fuel into electricity with no loss in performance or accelerated wear compared to the gasoline-powered generator it is derived from.

What types of fuels does PCI manufacture?

PCI has several very small to medium sized catalytic burner products in development for a variety of fuels including diesel, JP-8, natural gas, biofuels, propane, methanol, ethanol, fuel cell anode exhaust, and hydrogen. PCI has also developed, manufactured and delivered oxidizers for spacecraft ECCLS as well as PEM and SOFC fuel cell systems.

What is PCI's New batterytrader platform?

Get an inside look at PCI's new BatteryTrader platform -- built to automate bidding and optimize battery fleet performance across ISO markets using advanced analytics and strategy simulation tools.

As the energy landscape changes with the increased deployment of batteries, we gain valuable insights into the intricate dynamics of coupled energy systems.

Discover strategies to maximize battery ROI in ISO/RTO markets. Learn how automation, forecasting, and smarter bidding can boost BESS performance across energy and ...

PCI is the premier provider of software, superior customer support, and value-added services for energy companies worldwide. The all-in-one platform for ...
