

Port of Spain hydropower energy storage

What is Spain's energy storage program?

For stakeholders in battery storage, thermal storage, and pumped hydro, this program offers not only financial backing but also long-term stability and political support. Spain has launched a EUR700 million energy storage program to support battery, thermal, and pumped hydro projects, aiming to deploy 2.5-3.5 GW of capacity.

How has Spain strengthened its energy infrastructure?

Spain has taken a decisive step in strengthening its energy infrastructure with the launch of a EUR700 million support scheme aimed at expanding large-scale energy storage across the country.

How much grid-scale storage will Spain have in 2025?

As of early 2025, Spain has roughly 1 GW of grid-scale storage under construction, according to industry sources. This new wave of funding could accelerate the build-out, enabling developers, integrators, and OEMs to expand their footprint in one of Europe's most promising emerging markets.

Is Spain ready for a grid-scale storage program?

With a July 15 deadline, the program is expected to attract interest from across the continent, particularly as the European storage market gains momentum. As of early 2025, Spain has roughly 1 GWh of grid-scale storage under construction, according to industry sources.

Spain is facing many challenges trying to integrate a large amount of renewable energy (wind and solar) into real-time dispatch of its power generation to meet electricity ...

Europe hit a renewable energy milestone in 2024, with hydropower playing a key role in grid flexibility, energy security, and decarbonisation efforts.

The government of Spain is launching two programmes with EUR280 million in grants for standalone energy storage projects, thermal and PHES.

The ministry expects the selected projects to attract investments of around EUR 570 million, while contributing to Spain's target of reaching 22 GW of energy storage by 2030, in line with the ...
