

Precautions and requirements for disassembling energy storage tanks

Do you take the right safety precautions for stored energy?

Taking the right safety precautions for stored energy is essential to prevent accidents and ensure a safe environment. Whether you are dealing with electrical, chemical, mechanical, or thermal energy, following these guidelines will help you handle these powerful resources safely and effectively.

What precautions should be taken during storage tank removal?

Take all necessary precautions during removal of the tanks to prevent damage to utilities adjacent to the area. All fuel fill, boiler supply and other fuel lines and vents shall be removed. Prior to initiating storage tank removal activities, the Contractor shall notify the local fire department.

What are the requirements for removing a storage tank?

The requirements for removal depend on the tank type: As for the permanent withdrawal, you must keep a record of the date on which the removal of the storage tank system took place and a record (for example, an invoice) showing that the removal was carried out by an approved person or supervised by a professional engineer, as applicable.

What are some general safety tips for stored energy?

No matter what type of stored energy you are dealing with, there are some general safety tips that apply across the board. 1. Training and Education: Ensure that everyone who handles stored energy sources is properly trained and educated on the potential risks and safety precautions.

Is a storage tank system a hazard?

Whether active or inactive, a storage tank system is always a potential hazard. Removing a system or withdrawing it from service must be done properly to ensure there is no danger to people or the environment. Some provinces and territories license or certify persons to remove storage tank systems.

Can a storage tank system be removed?

Removing a system or withdrawing it from service must be done properly to ensure there is no danger to people or the environment. Some provinces and territories license or certify persons to remove storage tank systems. In these provinces and territories, only such persons can permanently withdraw a system from service, or remove it.
