

# Seiko solar battery dead

Does a Seiko solar watch need a battery replacement?

The captured energy is stored in a rechargeable cell, commonly referred to as the 'secondary battery,' designed to serve for several years without the need for replacement. Does It Need Battery Replacement? Typically, the secondary battery in Seiko solar watches is not one that you routinely replace, as in traditional watches.

Does Seiko recommend self-service battery replacement?

Seiko advises against self-service battery replacement, as this might disrupt the watch's intricate mechanisms or void its warranty. Rely on authorized service centers where professionals can handle the replacements using genuine parts. At the service center, experts will assess the watch's performance and battery condition.

How do I care for my Seiko solar watch?

**Regular Light Exposure:** Ensure your Seiko solar watch is exposed to adequate light to maintain its charge, avoiding performance lapses. **Proper Storage:** If you plan not to use your watch for an extended period, store it in an area with sufficient light access to keep the battery charged.

What should I do if my Seiko Watch doesn't move?

When recharging the watch, make sure that the watch is not heated to a high temperature. In case the watch does not move even after it is exposed to sunlight for 5-6 hours, it might need a repair. Please contact the nearest Customer Service Center for an overhaul. Seiko is one of the few fully integrated watch manufacturers.

Are Seiko solar watches a good choice?

**Conclusion:** Seiko solar watches represent a pinnacle in watch engineering, merging eco-consciousness with style and reliability. While they are designed for enduring performance, the need for battery replacement may arise after an extended period or due to specific issues.

What happens if a solar watch is not recharging?

In case the strength of light and amount of time are not enough, there is a possibility of insufficient recharging. A Solar Watch is a watch which moves by converting light energy into electronic energy. Light energy received by a solar cell (solar cell unit under the dial) is converted into electronic energy.
