

Solar battery storage near me

Can I add solar battery storage to my home power system?

With battery backup and non-backup options available, SunPower makes it easy to add energy storage to any home. Learn more about the benefits of adding solar battery storage to your home power system.

Do you need a solar battery backup system?

While full off-grid living requires significant battery storage, most homeowners find that staying connected to their local utility with a battery backup system is the most practical and cost-effective option. A trusted solar installer can help design the right setup for your needs. How do home solar batteries work?

Can solar power be stored in a battery?

Existing solar systems typically have solar inverters, which change the DC power produced by panels to AC power that can be consumed in your home or exported onto the grid. But if you want to store that AC power in a battery, it needs to be inverted again to DC power.

Where should battery storage be placed?

Typical placement is on an exterior wall of your home with sufficient space or potentially inside your garage. Pairing your battery storage with solar panels ensures you have reliable solar power available, even during a natural disaster or peak hours when electricity demand is high.

Is battery storage the future of energy?

The future of energy is here. Advanced battery storage solutions go beyond electricity storage. When combined with a solar system, it's an intelligent system that gives you unprecedented control over how you store and use electricity. The equation is simple: maximize your home's solar energy usage to minimize grid electricity purchases.

How many solar batteries do I Need?

Like solar panels, the size of your system (how many solar batteries we recommend you get) will depend on your unique battery and backup power needs. Factors such as the amount of electricity you use at home and the devices and appliances you want to back up will play a key role in designing your ideal battery storage system.
