

Solution for the switch not storing energy fault

What are the common faults of switchgear?

1. Common faults of switchgear (1) Switchgear reject closing. (2) Switchgear reject opening. (3) The red light is out. (4) The green light is out. (5) Abnormal sound of current transformer. (6) Locking failure, in the closing state, the net door can be opened. (7) The working light of the switchgear is out.

What are the causes of switchgear reject closing solution?

Switchgear reject closing solution (1) Improper operation. (2) The closing power supply loss. (3) The control circuit is disconnected. (4) Bad contact of transfer switch. (5) The closing coil is broken. The closing contactor coil is broken. (6) Poor contact of auxiliary contact.

Why is my switchgear lockout not working?

Reason of switchgear lockout failure (1) The door can be opened after the back brake is closed, and the lock didn't work, check whether the connecting rod fastening screw is loose, adjust it for closing test. (2) Check the locking between the switch and the disconnecter.

What are the reasons why kyn28 switchgear cannot be closed and opened?

The reason why KYN28 switchgear cannot be closed and opened (1) No control power display control circuit is disconnected. (2) Bad contact of transfer switch. (3) Spring non-energy storage energy storage indicator light off. (4) The car did not roll to the position, the car position indicator light off. (5) Poor contact of aviation plug.

What does it mean when the switchgear is closed?

(1) First of all, when the green light is on, closing it for one more time. If the switchgear is closed, it means that the transfer switch is not in place, which is improper operation.

Why is the red light on my switchgear out?

The reason why the red light of the switchgear is out (1) Use a multimeter to check whether the green terminal has voltage. If there is voltage, it means that the green light is bad and you should contact power failure to replace the red light.
