

What is air cooled seasonal energy storage (ACSES)?

The air-cooled seasonal energy storage (ACSES) system utilizes the natural cold energy of outdoor air during winter to cool the glycol-water solution inside the finned tube cooler. This glycol-water solution is then used to cool the water in the ice-water mixture storage tank through ice storage coils.

Does air cooled seasonal energy storage reduce energy consumption?

Compared to the ice storage system, the air-cooled seasonal energy storage system can reduce electricity consumption by 15131 kWh, resulting in a 72.75 % reduction in operating costs and significantly decreasing energy consumption. Tailu Li: Supervision, Methodology, Conceptualization.

What are the equipment parameters of air-cooled seasonal energy storage experimental system?

Air-cooled seasonal energy storage experimental system. Table 1. Equipment parameters of the experimental system. Ice storage coil diameter: 25 cm; Number of layers in the ice storage coil: 10; Ice storage coil layer spacing: 6 cm; Ice storage coil material: Copper; Ice storage coil specifications: ? 16 × 1.0.

Do high flow rates of ethylene glycol and outdoor air speeds improve cold storage performance?

Higher flow rates of ethylene glycol and outdoor air speeds are beneficial for the cold storage performance, but excessively high flow rates of ethylene glycol and outdoor air speeds do not significantly enhance the cold storage performance. (2). The number of tubes rows and tube passes are positively correlated with hourly cold storage capacity.
