What is dead tank circuit breaker?

See above picture of dead tank circuit breaker, here, for simplicity, only one phase of the breaker is shown. The breaker or interrupter unit i.e. fixed and moving contacts, arc quenching medium (SF₆ gas) etc. is placed inside a metal tank. This metal tank is earthed so this type of breaker is called dead tank or earthed tank circuit breaker.

What is a 3AV1 live tank circuit breaker?

At the same time, the 3AV1 live tank circuit breaker maintains the highest standards of performance and reliability. It delivers high voltages with the highest switching performance without degradation, and is capable of operating in extreme environmental conditions across the globe. Beginning of dialog window.

Why do we need a blue circuit breaker?

With Zero F-gases and Zero harm, this 72.5 - 145 kV circuit breaker makes a greener grid achievable. Why we need to go for Zero. And why you need Blue. With the energy sector having a greater carbon impact than every other industry combined, the urgent need for decarbonization to combat climate change cannot be overstated.
