

The button does not respond after the contact cabinet is charged

What if the battery button does not work?

If the battery button does not seem to work, you can use a fingernail to carefully lift up the rubber battery button and use a non-metallic object to press the true battery button underneath the rubber one. If the battery still does not power on, ensure it is charged and try the battery balancing procedure (attached below).

What should I do if my touch buttons don't work?

Gently clean the panel with a soft, slightly damp cloth, followed by a dry cloth to ensure it's completely free of moisture and debris. If the touch buttons still do not respond after these steps, there may be a deeper issue requiring professional repair.

What if the clear Battery button is stuck in the cover?

If you find there is an issue with the clear battery button getting stuck in the cover or a tight fit, you can file the clear button to improve the fit or contact Aventon customer support and we can provide a new clear battery button with your warranty coverage.

Why is my phone not charging?

Troubleshooting - Handset power related problems, handset is not charging, battery icon flashes, the unit does not work. Make sure the phone is firmly seated on the base/charger and that the charging contacts are making a good connection. Confirm "Charging" is displayed. Confirm you are using the correct batteries.

Can a loose battery fit cause a connection problem?

Loose battery fitment can cause issues with connection and if you suspect this issue, please contact Aventon support. Either adjustments can be made or replacement lock assemblies may correct this issue. For Pace 350.2/500.2 or 350.3/500.3 bikes, it is important to check the locking on the battery and the bike terminal.
