

The green giant energy storage box battery is fully charged and is still charging

What happens when a giant battery is over?

“When a Giant battery is over, say, 92%, the charger will stay red and no charging on an attempt to recharge. It is normal. Discharge the battery to 90% then you can recharge it to 100%.” A little info in the instruction book would be nice. BTW in removing the battery I noticed that these things are no way waterproof or even water resistant.

What does a fully charged battery mean?

A fully charged battery will have a charging port that is not illuminated or showing any signs of active charging. If the charging port is still lit or flashing, it indicates that the battery is still in the charging process and not yet fully charged.

How do I charge my energypak battery?

Charge the EnergyPak battery at room temperature (17°C/68°F). Charging below 0°C or above 40°C (32°F~104°F) can lead to insufficient charging and can have a negative impact on the battery life cycle. Make sure the bike is steady and standing firmly when charging the EnergyPak on the bike.

Can a battery charge a bike if the energypak is off?

I'll try that - blow out the contacts, although the problem exists when the energypak is on or off the bike, and thus the contacts are connected differently to the charger. Also, the energypak still powers the bike when it's connected to it, so the battery is still able to discharge, and should be able to charge.

Is the energypak fully charged?

The energypak was fully charged when this started. I think it changed with the 2020 models, although Giant's really hard to get information from. In the 2020 models, the charger is supposed to flash green when it's charging and the LED's on the energypak light up.

What happens if the energypak plus battery is empty?

STEP When the EnergyPak plus (B) is empty, the system will switch back to the main battery (A). The main battery will deliver power for a short time, until the assistance is finally switched off and the battery indicator on the RideControl starts blinking. Page 7 Q: Can I use EnergyPak Plus without the main battery? A: No.
