

# The latest eu energy storage policy

Should the European Commission adopt an energy storage action plan?

The European Commission must adopt an Energy Storage Action Plan within a broader Flexibility Package, to harmonise markets, remove regulatory barriers, and ensure storage is integral to national energy strategies.

What is the European Commission doing about energy storage?

The European Commission in 2020 published a study on energy storage, which summarized some previous studies and reports, explored current and potential energy storage markets in Europe, and set out policy and regulatory recommendations for energy storage.

Why is European energy storage important?

This is particularly important in the context of EU energy security and the transition away from fossil fuels for both environmental and geopolitical reasons. To help track this growing industry, the European Union has created a comprehensive database of the European energy storage technologies and facilities.

What are EU energy storage initiatives?

EU energy storage initiatives are a key part of advancing energy security and the transition toward a carbon-neutral economy, improving energy efficiency, and integrating renewable energy sources into electricity systems, and can play an integral role in balancing power grids and saving surplus energy.

What is the European energy storage inventory?

In March 2025, the Commission launched the European Energy Storage Inventory, a real-time dashboard that displays energy storage levels across different European countries. It is the first European-level tool of its kind and offers energy storage data across a full range of technologies.

Why should EU countries consider the 'consumer-producer' role of energy storage?

It addresses the most important issues contributing to the broader deployment of energy storage. EU countries should consider the double 'consumer-producer' role of storage by applying the EU electricity regulatory framework and by removing barriers, including avoiding double taxation and facilitating smooth permitting procedures.

In 2023, the energy crisis saw electricity prices soar, driving an explosion in demand for lithium battery energy storage Household energy ...

The first stream aims to demonstrate the capability of first-of-a-kind energy storage facilities through actual demonstrations by March 2025 ...

As Europe continues its transition to a more sustainable and resilient energy system, energy storage remains a critical enabler of renewable energy ...

A panel discussion on the Polish market at the recent Energy Storage Summit CEE in Warsaw. Image: Solar Media The European Commission (EC) has approved a EUR1.2 ...

The EU is advancing several key projects and initiatives in the energy storage field to boost renewable energy integration, stabilize the grid, and support clean energy goals. These ...

In June 2023 the European Court of Auditors (ECA) published a special report titled "The EU's Industrial Policy on Batteries - New Strategic Impetus Needed." The document emphasised the ...

" The LDES Council becomes the latest partner to join the Energy Storage Coalition, building on the strong foundation established by the ...

Discover the evolving policies and regulations of the European Union and United Kingdom, with both issuing landmark legislation in the ...

About The European Electricity Review analyses full-year electricity generation and demand data for 2024 in all EU-27 countries to understand the region's progress in ...

The growth of renewable energy sources is a vital step towards achieving the EU's climate and energy goals. Along with grid expansion & optimisation, the ...

The platform also highlights: A comprehensive technology landscape including mechanical, electrochemical, chemical, and thermal storage; Insights into policy frameworks and the EU's ...

The European Commission on Monday greenlit a new aid scheme to enable Spain to deploy large-scale energy storage with co-financing ...

The European Commission has officially launched the European Energy Storage Inventory, a real-time dashboard for energy storage. The goal ...

The European Energy Storage Market Monitor (EMMES) updates the analysis of the European energy storage market (including household storage, industrial ...

The European Energy Storage Market Monitor (EMMES) updates the analysis of the European energy storage market (including household storage, industrial storage and pre-metre storage) ...

For the rollout of solar and wind energy in the EU to keep up the momentum and deliver on the block's decarbonization goals, a ...

For example, electrothermal energy storage stands out for its capacity to electrify heat while storing energy,

# The latest eu energy storage policy

making it well-suited for meeting the continuous and large-scale heat demands ...

EU countries should consider the double "consumer-producer" role of storage by applying the EU electricity regulatory framework and by removing barriers, including avoiding ...

The latest analysis from SolarPower Europe reveals that, in 2024, Europe installed 21.9 GWh of new battery energy storage systems (BESS), ...

A new interactive platform--the European Energy Storage Inventory --has been launched to provide near real-time insights into energy storage deployment across the EU, ...

The European industry body is having a major push on the benefits of co-locating solar with wind power and energy storage, or both, and ...

The EU leads in public investments in energy storage technologies and leads the world in the thermal energy storage market, for example dominating in molten salts with ...

Different studies have analysed the likely future paths for the deployment of energy storage in the EU. These studies point to more than 200 GW and 600 GW of energy storage capacity by ...

Discover the evolving policies and regulations of the European Union and United Kingdom, with both issuing landmark legislation in the energy storage. EU energy storage ...

Introduction The issue of batteries is relevant to many policy areas, from transport, climate action and energy to waste and resources. The development, production and use of batteries are key ...

EU battery storage is ready for its moment in the sun Coupling renewables and clean flexibility growth, the EU can benefit from abundant ...

Energy storage recommendation addressing various issues to promote energy storage, in particular regulatory barriers, better consideration of energy storage as part of grid planning ...

The latest edition of the European Market Monitor on Energy Storage by the European Association for Storage of Energy and LCP Delta, released on 31 March, highlights ...

Why the EU's New Battery Rules Matter for Your Energy Future You've probably heard the buzz about Europe's updated energy storage policies - but what do they actually mean for ...

Parliament's latest resolutions on energy have seen an increase in the relevance and ambition of all climate and environmental objectives underpinning EU energy policy. In November 2019, ...

# The latest eu energy storage policy

The European Union and United Kingdom have enacted energy storage policies and regulations, with both issuing landmark legislation in ...

This report outlines five key policy recommendations to unlock BESS deployment across the EU: First, the European Commission must adopt an Energy Storage Action Plan ...

In the first quarter of 2023, the EU Commission produced a veritable torrent of favorable policy proposals, with the Electricity Market Reform (EMR) at its core and backed by ...
