

The latest policy on new energy storage grid connection

Is grid interconnection still a bottleneck?

"It is promising to see the unprecedented interest and investment in new energy and storage development across the U.S., but the latest queue data also affirm that grid interconnection remains a persistent bottleneck," said Joseph Rand, an Energy Policy Researcher at Berkeley Lab, and lead author of the study.

Is grid interconnection causing project delays & cancellations?

The Federal Energy Regulatory Commission (FERC) adopted major interconnection reforms in 2023 that have not yet taken effect in most regions; project developers continue to cite grid interconnection as a leading cause of project delays and cancellations.

Why do we need a secure grid connection?

Josh Buckland, EDF's strategy and policy director, said: "Access to a timely and secure grid connection is vital to accelerating the deployment of clean power right across the country and giving households and businesses access to homegrown power.

Why is new electric generation and storage important?

U.S. electric demand is projected to increase considerably in coming years, with a resurgence in U.S. manufacturing alongside demand from new data centers, electric vehicles, and building electrification. Connecting new electric generation and storage is urgently needed to meet this growing demand.

What are the proposed energy reforms?

These proposed reforms are the result of over two years of activity across the energy industry covering consultations, code modification working groups and wider engagement to create these proposals submitted to Ofgem by the National Energy System Operator (NESO).

When will Ofgem's new infrastructure system start?

This new system, which prioritises projects that are "ready" and "needed" would see accelerated new offers made by the end of the year, with the first connected and operational from 2026. Akshay Kaul, Ofgem's Director General for Infrastructure, said:

The UK is changing its electricity grid connection process to prioritise clean energy projects and create billions in private investment. These new changes are expected to ...

The following paragraphs explain the pros, cons, and market outlook of grid forming energy storage under current policy frameworks.

With grid interconnection reforms underway across the country, a Berkeley Lab-led study shows nearly 2,600

The latest policy on new energy storage grid connection

gigawatts of energy and storage capacity in transmission grid ...

The Commission has presented today a Guidance document on anticipatory investments for developing forward-looking electricity networks.

Today FERC took an historic step in the modernization of the nation's transmission grid by streamlining the interconnection process for transmission providers, ...

New policy provides twice yearly "batches" through EirGrid and ESB Networks for the processing of connection offers for renewable generation ...

Ofgem is expected to confirm the National Energy System Operator's ambitious new plan to reform grid connections and unlock billions of investment.

The new approach to transmission storage connections - a flagship policy in the ESO's five-point plan to speed up connections - comes ...

"Grid connection reform - a key tenet of the UK government's net zero and growth ambitions - is evolving rapidly. NESO, responsible for ...

Grid companies and power dispatching agencies must formulate new energy storage grid connection rules and grid connection service work guidelines, clarify the grid ...

Drs. Eva Barrett and Maria Hallinan, from ISEA, gathered key insights from the new grid connection policy & how it'll impact solar projects.

For energy storage, the new Chinese policy emphasized the need to remove energy storage as a prerequisite for renewable energy project ...

The UK is changing its electricity grid connection process to prioritise clean energy projects and create billions in private investment These ...

For energy storage, the new Chinese policy emphasized the need to remove energy storage as a prerequisite for renewable energy project grid connection, a requirement ...

Today FERC took an historic step in the modernization of the nation's transmission grid by streamlining the interconnection process for ...

The operator reported a significant backlog of battery energy storage projects awaiting grid connection in the UK in January and to manage the backlog, and remove the ...

The latest policy on new energy storage grid connection

Energy-Storage.news Premium speaks with Ryan Hledik, Principal at the Brattle Group, and Lauren Nevitt, Senior Director of Public Policy at Sunrun, on the shaky future of California's ...

New rules to speed up electricity grid connections for viable projects and allow stalled or speculative developers to be forced out of the queue have been announced by ...

Grid Standards and Codes NREL provides strategic leadership and technical expertise in the development of standards and codes to improve ...

The backlog of new power generation and energy storage seeking transmission connections across the U.S. grew again in 2023, with nearly 2,600 gigawatts (GW) of ...

WASHINGTON, D.C. -- Today the Solar Energy Industries Association (SEIA) is unveiling a new policy agenda that details the critical actions that local, state, and federal ...

The Dutch government has introduced new regulations to reduce grid fees through the implementation of "Non-Fixed Agreements" (NFA) and time-weighted rates, which ...

Electric grid energy storage is likely to be provided by two types of technologies: short-duration, which includes fast-response batteries to provide frequency management and energy storage ...

With grid interconnection reforms underway across the country, a Berkeley Lab-led study shows nearly 2,600 gigawatts of energy and storage ...

In April 2024, ESO published its latest proposals for grid connection reform. This extends new queue management processes to existing projects.

DOE's Office of Electricity Grid Storage Launchpad, hosted at DOE's Pacific Northwest National Laboratory (PNNL). Image: US Department ...

This week we look at the continuing grid connection reforms, DESNZ's consultation on changes to the Capacity Market, Ofgem's call for ...

5 · Policy China targets 180 GW of new energy storage by 2027 in ambitious national plan Announced by the National Development and Reform Commission (NDRC) and the National ...

With the mandate of the new Energy Commissioner being developed, it is critical to investigate whether implementation of the newly set out EU grid policy ...

The latest policy on new energy storage grid connection

6 · As governments across Central and Eastern Europe push to strengthen energy independence and accelerate renewable adoption, energy storage is becoming the ...

Why Grid Connection Specs Matter More Than Ever Ever tried plugging a 1970s toaster into a smart home system? That"s essentially what happens when energy storage ...

With the mandate of the new Energy Commissioner being developed, it is critical to investigate whether implementation of the newly set out EU grid policy framework will be sufficient to ...

5 · China on Friday unveiled an action plan to promote the development of new forms of energy storage between 2025 and 2027, amid efforts to support green energy transition and ...
