

# Truma solar dual battery charger flashing green

Why is my Truma controller not charging?

There is no connection from your Truma controller as its only currently configured for one battery connected. The second battery connection is unused, the charge should default 100% to the one battery. You don't advise if you have a gel battery or not-sometimes the dealers who install the controllers don't always set them correctly.

Which batteries should be used in a Truma automatic charger?

Only use suitable modules for example Truma SM 25,40,65,80,100,120,150 or 180. Observe the maximum voltage and power draw values. The preferred application fields for the automatic charger are batteries with gel, AGM or liquid electrolyte. The device is designed for installation in a dry indoor environment. nickel-cadmium batteries.

What does a solar charge controller battery blinking green mean?

solar charge controller battery blinking green means the battery is fully charged and in a saturated state, A flashing red battery light means the battery is undercharged and needs to be recharged in time. Solar controller loads are small DC devices that can be powered directly by a solar battery.

How do I know if my Truma SDC is fully charged?

We have the Truma SDC 10 /20 version which is probably an older one. You should have a green light showing when fully charged. Have you measured the voltage going into the unit from solar panel and also the voltage coming out? You would need to check your manual to determine which is the solar panel feed.

Why is my solar charge controller blinking?

If a warning light is blinking on the Solar Charge Controller, it may be due to faulty wiring, battery over-charging or under-charging, or equipment failure. So you have to make sure your system is properly wired, your equipment is up to date, and your battery is being charged properly.
