Where is emergency crude oil stored?

Emergency crude oil is stored at the Strategic Petroleum Reserve (SPR) in underground salt caverns at four major oil storage facilities in the Gulf Coast region of the United States, two sites in Texas (Bryan Mound and Big Hill), and two sites in Louisiana (West Hackberry and Bayou Choctaw).

When will crude oil storage capacity data be released?

Crude oil storage capacity data are also provided for Cushing, Oklahoma, an important crude oil market center. Data through 2019 were released twice each year near the end of May (data for March 31) and near the end of November (data for September 30). Beginning with 2020, only data for March will be collected and released near the end of May.

How many oil storage facilities does the SPR have?

The SPR's oil storage facilities are grouped into three geographical pipeline distribution systems in the Gulf Coast: Seaway, Texoma, and Capline. Each of these pipeline systems has access to one or more major refining centers, interstate crude oil pipelines, and marine terminals for crude oil distribution.

How much crude oil is in SPR?

At the end of calendar year 2024, SPR inventory consisted of approximately 394 Mbbbl of crude oil in underground storage caverns located in Texas and Louisiana.

What is an example of a crude oil directive?

For example, conditions might include a not-to-exceed price per barrel for direct purchases, a directive to acquire crude oil volumes at prescribed monthly amounts over a multiyear period, or a directive to accelerate purchases, to the extent possible, should crude oil prices fall below a certain level.
