

How many solar installations are there in the UK in May 2025?

There were 21,125 small-scale solar installations in the United Kingdom in May 2025, according to accreditation body MCS, which also recorded a record month for battery energy storage additions. Data for PV installations up to 50 kW show May's installation figures were 30% higher than the same month the previous year.

How much battery capacity will the UK have by 2025?

By the end of 2025, cumulative UK installed grid battery capacity is set to reach 8GW. While speeding up grid connections is welcome, simplifying local planning policies is equally crucial.

What makes the UK a good place to buy solar power?

The UK now boasts hundreds of solar installers and EPC contractors, and a burgeoning ecosystem of storage integrators and aggregators. This competitive mix is driving innovation and cost reduction, but also creating a race for grid connections and power purchase deals as companies jostle to secure the best sites.

The UK's solar energy and battery storage sector is undergoing a rapid transformation, bolstered by ambitious climate targets and supportive policies. Solar photovoltaics (PV) capacity has rebounded since the end of ...

With the move toward a net-zero UK and growing demand for renewable energy solutions, battery storage is no longer optional--it's essential. Installing an Enphase 10kW battery enhances the value and performance of ...

This session explores the critical steps for identifying and accurately capturing battery value for commercial solar projects, based on key findings from our recent white paper ...

There were 21,125 small-scale solar installations in the United Kingdom in May 2025, according to accreditation body MCS, which also recorded a record month for battery ...

GB battery buildout hit 5.2 GW in Q1 2025. This report breaks down new projects, rising durations, and how portfolios are scaling across the market.

The UK's solar energy and battery storage sector is undergoing a rapid transformation, bolstered by ambitious climate targets and supportive policies. Solar ...

It covers key market trends, with a particular focus on the shift toward utility-scale storage, the continuing growth of residential and commercial installations, and the evolving role ...

Recent planning regulation changes have opened new doors for commercial rooftop solar installations. Project size thresholds have increased from 1MW to 5MW, making it ...

With the move toward a net-zero UK and growing demand for renewable energy solutions, battery storage is no longer optional--it's essential. Installing an Enphase 10kW ...

Launched in 2021, the MCS battery installation standard applies to systems with a maximum power output of up to 50 kW. MCS also reported 21,125 installations of solar ...

Activity in the UK battery storage market continues to grow substantially year-on-year despite numerous headwinds, as detailed in this H1 recap.

From policy changes for planning and accelerating grid connection to new revenue streams for energy storage providers, 2025 is set to be a big year for batteries in the UK.
