

Water storage ratio

What is reservoir regulation Ratio?

The regulation ratio is determined as the ratio of the average annual regulated water area or water storage to the average annual maximum water area or water storage over 6 years. The change in water area and water storage due to reservoir regulation was prominent in the NWR Basin, SWR Basin, and coastal areas.

How much water does a reservoir store?

We estimated the water storage of all reservoirs corresponding to different WFs in 2017-2022. Similar to the trend of area change, the total annual maximum water storage of reservoirs fluctuated between 741.08 and 819.97 km³ from 2017 to 2022 (Fig. 4 b), with the highest value recorded in 2022.

How much water is stored a year?

SWAT estimated the multi-year average water storage to be 106.0mm (Li et al., 2024). InVEST estimated the multi-year average water storage to be 29.6mm (Ye et al., 2023). WB estimated the multi-year average water storage to be 85.8mm (Zhang et al., 2022), and RSI estimated the multi-year average water storage to be 392.5mm (Han et al., 2023).

Why are water storage estimates different based on different methods?

The significant differences in the multi-year average water storage estimated by the different methods are mainly due to the various degrees of factors, such as land use and topography considered by RSI, SWAT, InVEST, and WB.

What is the average regulated water storage in China?

The average annual regulated water storage of the reservoirs is estimated at 465.74 km³, accounting for 43.72 % of the total designed water storage of reservoirs in China. Among the basins, the Yangtze River Basin and Pearl River Basin have the highest average annual regulated water storage of 152.52 and 84.94 km³, respectively.

Does reservoir regulated water storage correlate with population and irrigated area?

In general, a significant correlation with reservoir regulated water storage was observed for population, irrigation area, and precipitation, and the correlation with population and irrigated area was relatively high.
