What are the business models for large energy storage systems?

The business models for large energy storage systems like PHS and CAES are changing. Their role is traditionally to support the energy system, where large amounts of baseload capacity cannot deliver enough flexibility to respond to changes in demand during the day.

How to make the energy storage industry more standardized?

In order to make the energy storage industry more standardized, the business model of energy storage should be studied in depth. 3. Development of various energy storage business models in China

How do business models of energy storage work?

Building upon both strands of work, we propose to characterize business models of energy storage as the combination of an application of storage with the revenue stream earned from the operation and the market role of the investor.

Are energy storage business models fully developed?

Even though the business models are not yet fully developed, the cases indicate some initial trends for energy storage technology. Energy storage is becoming an independent asset class in the energy system; it is neither part of transmission and distribution, nor generation. We see four key lessons emerging from the cases.

What is the business model of energy storage in Germany?

The business model in the United States is developing rapidly in a mature electricity market environment. In Germany, the development of distributed energy storage is very rapid. About 52,000 residential energy storage systems in Germany serve photovoltaic power generation installations. The scale of energy storage capacity exceeds 300 MWh.
