What happens if a power generation & energy storage facility fires?

Power generation and energy storage fires can be very costly, potentially resulting in a total write-off of the facility. Fires happen quickly and may spread fast, destroying critical company assets. Passive fire protection may lower risk but ignition sources and fuel supplies remain.

What are the ESS safety requirements for energy storage systems?

The International Fire Code (IFC) published its most robust ESS safety requirements in the most recent 2021 edition. By far the most dominant battery type installed in an energy storage system is lithium-ion, which brings with it particular fire risks.

Do you need active fire protection?

Passive fire protection may lower risk but ignition sources and fuel supplies remain. Remote and unoccupied spaces with indoor and outdoor switchgear, transformer equipment, turbine rooms, generator rooms, electrical cabinets, converters/inverters and lithium-ion batteries are real fire hazards where active fire protection is needed.
