

What difficulties does the energy storage industry face when going global

What challenges hinder energy storage system adoption?

Challenges hindering energy storage system adoption As the demand for cleaner, renewable energy grows in response to environmental concerns and increasing energy requirements, the integration of intermittent renewable sources necessitates energy storage systems (ESS) for effective utilization.

Why is energy storage a problem?

The lack of direct support for energy storage from governments, the non-announcement of confirmed needs for storage through official government sources, and the existence of incomplete and unclear processes in licensing also hurt attracting investors in the field of storage (Ugarte et al.).

Will energy storage grow in 2024?

The energy storage sector maintained its upward trajectory in 2024, with estimates indicating that global energy storage installations rose by more than 75%, measured by megawatt-hours (MWh), year-over-year in 2024 and are expected to go beyond the terawatt-hour mark before 2030.

How does market design affect energy storage technology development in Europe?

Inadequate market design in Europe is more in favor of traditional technologies and pushes the market towards more use of old technologies rather than preparing for the presence of emerging technologies, and this can affect and reduce the speed of development and spread of new energy storage technologies (Ruz and Pollitt, 2016).

Will energy storage growth continue through 2025?

With developers continuing to add new capacity, including 9.2 GW of new lithium-ion battery storage capacity in 2024 through November 2024 and comparable levels of growth expected through the fourth quarter of 2024, energy storage investments and M&A activity are expected to continue this trajectory through 2025.

Why are investors not able to invest in energy storage?

But currently, the running programs and unbalanced pricing in the market, the lack of certainty and certainty in regulatory affairs and the economy, are challenges that prevent investors from entering the field of energy storage (Castagneto Gissey et al., 2018).
