Why is 2024 a good year for energy storage?

2024 is the start of energy storage in the Middle East and Africa, with 2.7 GWh of capacity. Key points: Tender projects surged, exceeding 40 GWh, mainly from the UAE and Saudi Arabia. China-funded companies led, winning most announced projects. Intense competition lowered bid prices compared to other regions.

Should energy storage be developed?

Developing energy storage has become a global consensus. It was announced at COP29 in late 2024 that global storage capacity will increase to 1,500 GW by 2030, more than six times the 2022 level. As a result, InfoLink maintains a cautiously optimistic outlook for the medium- to long-term development of energy storage systems.

How can manufacturers capitalize on energy storage trends?

To capitalize on this trend, manufacturers should focus on market insights and plan for new opportunities. Developing energy storage has become a global consensus. It was announced at COP29 in late 2024 that global storage capacity will increase to 1,500 GW by 2030, more than six times the 2022 level.

How has cost decline impacted energy storage?

This trend may highlight that the cost decline over the past few years has driven energy storage into an era of accelerated diversification in the global market. The European energy storage market added 19.1 GWh of installed capacity in 2024, up 12.4% YoY, with drastic changes in the ESS landscape throughout the year.
